Free-portable software, which can be used with or without a dermatoscope and a personal photo camera to visualize, monitor and diagnosis pigmented lesions.
52. **Automated Fuzzy Regression Methods.**
In the script for R some automated fuzzy regression methods are implemented. Particularly, it contains routines for: Batch Least Squares, Recursive Batch Least Squares, Modified Learning from Example and Combined Recursive Batch Least Squares. The methods were implemented exploiting the structure of some applications in Economy which are usually modeled by standard regression.
53. **Fuzzy Hybrid System for Modelling Time Series.**
In the script for R a Fuzzy Hybrid System for Modelling Time Series is implemented. The system is based on SARIMA models and uses the forecast package from R.
